

Fine Grade Emcol

Fine Grade Emcol is a cold-mixed instant road repair that has been specially formulated for shallow repairs. **Fine Grade Emcol** is also ideal for repairs requiring a tight, smooth finish, providing a quality surface for driving and walking.

Usage

1. Repair of potholes
2. Repairs to cracks and rippling/rutting of road surface
3. Manhole reinstatements, infilling expansion joints between road surface and bridge

Features

1. **Fine Grade Emcol**, 3mm top, can be applied to cracks and rippling surfaces to prevent further damage from occurring.
2. When reinstating manholes, **Fine Grade Emcol** is specially designed to be applied around the edges of the manhole, interlocking with the existing road surface.
3. **Fine Grade Emcol** provides easy operability material for use in cold weather.
4. **Fine Grade Emcol** ensures a high quality, smooth finish is achieved.

Guideline for application

1. **Fine Grade** takes slightly longer to cure compared to **Standard Emcol**. Spraying sand or dust on the **Emcol** repair can accelerate this process.
2. In very shallow repairs requiring only a thin layer of **Emcol** it is best to even out the material with a trowel rather than a rake.
3. For deep holes it is recommended that a combination of **Drainage Emcol**, 13mm top, and **Emcol Standard**, 5mm top, be applied.
