

# Drainage Emcol

Surface water on the road can cause severe problems with skidding and noise pollution. Consequently the use of porous asphalt in road surfaces is expanding and is an increasingly popular choice. The need for a porous repair compound is equally important.

## Usage

Repairs to drainage, porous road surfaces  
Repairs to potholes 5cm in depth

## Features

**Drainage Emcol** (13mm top) is ideal for porous road surfaces and has excellent operability.

## Guidelines for application

It is advised that a combination of **Drainage Emcol** and **Emcol Standard / Emcol Fine Grade** is used for the edges of the repair.
